

## Los Angeles Celebrates the L.A. Aqueduct Centennial

One hundred years ago, City officials and thousands of hardworking laborers helped City Engineer William Mulholland build an engineering marvel that would bring water to Los Angeles from 233 miles north. On November, 5, we celebrated the centennial of this masterwork.

Today, the Los Angeles Aqueduct is the backbone of a water system that supplies 600 million gallons of drinking water to L.A. each day. The city has since grown from a pueblo to one of the largest international business hubs in the world, a thriving metropolis and home to 4 million people. Currently, LADWP is leading an effort to expand our local water supplies and reduce our reliance on imported water. But the importance of the L.A. Aqueduct will remain, and we celebrate its enduring legacy that helped Los Angeles grow to become the second largest city in the U.S.A.
